SAVITHRI MARATI

DevOps & Cloud Engineer | AWS · Kubernetes · Terraform · CI/CD | Release-quality mindset from QA | Immediate Joiner

savithri62001@gmail.com | +91-9483649855 / 8197418155 | GitHub: Savithri0608 | LinkedIn: Savithri-Marati | Portfolio: Savithri

PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 3+ years of experience building CI/CD pipelines, Terraform-managed AWS infrastructure and Kubernetes (EKS) deployments in a product-based environment. Cut AWS EC2 and S3 costs by 20% and ML model deployment time by 60%. A QA background in functional, regression and smoke testing adds release-quality discipline to every pipeline I build. Targeting DevOps, Cloud and Platform Engineering roles.

TECHNICAL SKILLS

- **Cloud (AWS):** EC2, S3, IAM, VPC, RDS, EKS, Lambda, Route 53, CloudWatch, EBS
- **Infrastructure as Code:** Terraform, Ansible, Helm
- **CI/CD and GitOps:** Jenkins, GitHub Actions, Argo CD, Git
- **Containers and Orchestration:** Docker, Kubernetes, Amazon EKS
- **Monitoring and Logging:** Prometheus, Grafana, EFK Stack, CloudWatch
- **MLOps:** MLflow, DVC, KServe, continuous training pipelines
- **Scripting and OS:** Python, Bash, Linux
- **Security and Code Quality:** SonarQube, Trivy, IAM least-privilege, security groups
- **QA and Testing:** Manual functional, regression and smoke testing, test case design, defect tracking and triage in Jira, AI-assisted test authoring (Claude with MCP), Postman
- **Data and Messaging:** PostgreSQL, MySQL, Kafka

PROFESSIONAL EXPERIENCE

Associate QA Engineer (DevOps and Manual QA) | ScleraVDMS Private Limited, Mangaluru, India| **Apr 2024 – Oct 2026**

- Cut AWS EC2 and S3 spend by 20% through EC2 rightsizing, S3 lifecycle policies and Reserved Instance planning.
- Reduced ML model deployment cycle time by 60% by building an end-to-end MLOps pipeline with MLflow, DVC, Docker and KServe.
- Built and maintained 5+ CI/CD pipelines using Jenkins and GitHub Actions, eliminating manual deployment steps and improving release consistency across services.
- Provisioned AWS infrastructure (EC2, S3, RDS, IAM, VPC, EKS, Route 53, CloudWatch) with Terraform, giving repeatable, auditable deployments across dev, staging and production.
- Containerized 10+ microservices with Docker and deployed them to Amazon EKS with zero-downtime rolling updates, supporting a monolith-to-microservices migration.
- Implemented GitOps with Argo CD for version-controlled deployments and faster rollbacks during production incidents.
- Built Prometheus and Grafana dashboards and centralized logging on the EFK stack, improving P1/P2 incident response and cross-service troubleshooting.
- Automated infrastructure health checks with Bash and Python, and configured IAM roles and security groups on least-privilege principles.
- Deployed and versioned services with Helm charts and maintained Ansible playbooks for server provisioning.
- Mentored new team members on CI/CD and cloud practices.
- Ran manual functional, regression and smoke tests on microservices before each release, and logged and triaged defects in Jira with development teams to protect release quality.
- Leveraged Claude with MCP (Model Context Protocol) to accelerate test case authoring, generate edge-case scenarios, and improve regression test coverage, reducing manual test design effort.

Junior System Engineer | Access Research Labs (ARL), Mangaluru, India **Mar 2023 – Mar 2024**

- Managed and monitored Linux servers across production and staging, keeping uptime and performance stable.
- Resolved P1/P2 incidents through health checks, log analysis and triage to maintain SLA compliance.
- Set up and maintained 5+ Jenkins CI/CD pipelines for faster, more reliable deployments.
- Helped provision AWS resources (EC2, S3, IAM) and supported early Terraform automation.
- Containerized applications with Docker and assisted with initial Kubernetes deployment configurations for microservices.
- Worked with development teams on GitFlow branching, code review gates and quality checks inside CI/CD workflows.

- Wrote and maintained runbooks for system administration and incident response.

KEY PROJECTS

Asset Data Collection Platform

- Designed and deployed a three-tier app (React, Node.js, PostgreSQL) on AWS EKS, with Jenkins CI/CD and Terraform modules automating provisioning and delivery.
- Implemented GitOps with Argo CD and Helm, plus Prometheus, Grafana and EFK monitoring, for repeatable, auditable releases across dev, staging and production.

Tech: AWS EKS, Docker, Kubernetes, Jenkins, Terraform, Argo CD, Helm, Prometheus, Grafana, EFK

Attrition Forecaster (MLOps)

- Designed an end-to-end ML pipeline with GitHub Actions CI/CD, DVC dataset versioning and Kubernetes-based model serving.
- Automated retraining and redeployment through Argo CD and KServe, with MLflow tracking experiments and model versions.

Tech: Python, Docker, Kubernetes, Argo CD, KServe, MLflow, DVC, GitHub Actions

AWS Cloud Cost Optimization

- Wrote a Python AWS Lambda function that finds and deletes stale and orphaned EBS snapshots, cutting storage waste.
- Rightsized EC2 instances from utilization metrics and set S3 lifecycle policies by access pattern, tracked through CloudWatch.

Tech: AWS EC2, Lambda, EBS, S3, Python, CloudWatch

Inventory Management System

- Deployed a four-service platform: Authentication and User services (Java), a Kafka-driven Notification service (Go) and a Data Processing service (Python).
- Containerized each service for independent releases, with coordinated monitoring across the stack.

Tech: Java, Go, Python, Kafka, Docker, Kubernetes

EDUCATION

Bachelor of Engineering, Electronics and Communication Engineering *2019 – 2023*
Canara Engineering College [CGPA: 8.7/10]
